"Drinking Men Discharged"

Whisky has been driven from every place of henor because it is a bar to achievement, and a deadly enemy of happiness, and a menace to physical and mental health.

A majority of all habitual users of alcohol would gladly quit drinking if they could ever get the poison out of their systems, and reach a condition in which they could live in comfort without it.

The Globe Three Day Treatment is safe, reliable and speedy. It strengthens every 'nerve' and organ of the mind and body, driving out every vestigs of alcoholic poisin from the system, leaving it clean and healthy. We accompilsh this without hypodermic injections, without the use of system wrecking drugs, without a long and expensive rosidence in a sanitarium, and you will be detained but three days from your business.

We guarantee a cure at the end of the third day. If you are not satisfied the full fee paid shall be refunded.

THE GLOBE 3 DAY LIQUOR CURE

A Scientific Trentment for the Drug and Liquor Habit. E. A. THOMAS, Manager. Santterium 2013 Atlanta St., El Paso, Tex. Phone Auto, 2481.

Testimonials from grateful El Paso patients given upon request.

RENE BACHE'S BUDGET.

WILL BE ACCOMPLISHED BY DOING AWAY WITH HOG CHOLERA.

Federal Government, Having Completed Its Experiments, Is Handing the Business Over to the States-Work To Be Undertaken on a Great Scale in the Corn Belt—A Saving of \$25,000,000 Per Annum on Pork.

> the disease. But in this case the disease artificially produced was contagious, and

> the pig, if it recovered, was proof there-

such blood was passed through a filter, so as to get rid of the bacilli and all other visible bacteria, it was still as

viruient as before, readily producing hog cholera. Obviously, then, there must be another germ invisible, because of its

extreme minuteness, even under the

Credit to Dorset.

Here was the beginning of success in a long series of experiments leading up

to a great discovery, the credit for which must be given to Dr. Marion Dor-

set, of the Bureau of Animal Industry. But, of course, the really important work had still to be accomplished. To

know that an invisible germ existed was

one thing; to make use of it in a practical way was another. Even at the present time no means is known whereby the "ultra-microscopic" microbe of hog ebolera can be bred in artificial "cul-

picked out certain hogs which, owing to some accident of nature, were proof

ASHINGTON, D. C., July 9.— In fact, they seemed to be as liable to eatch the malady and die of it as any Pork is to be cheaper. The price is to be lowered by saving to the farmers \$25,000,000 a year which they now lose by the plague of hog cholera.

Up to now no means has been known whereby the disease could be dealt with

whereby the disease could be dealt with effectively. During the summer and early fall of every year it has raged, causing an annual loss of as much as \$5,000,000 to individual states, such as after against hog cholers.
This fact shed some light upon the problem. For it seemed to prove that there was something else in the blood of the cholera-sick hog that had to do with the disease—some thing, that is to say, other than the bacillus already mentioned. Indeed, it was found that when Missouri and Iowa. But the federal government has at last solved the problem, and there is every reason to expect that within a few years hog cholera in this ountry will be practically eliminated. It will no longer exist, save for an occa-sional small outbreak, perhaps, which

can be easily checked. The government, having found a sensely for the mischief—a "serum." that is to say, which renders pigs cholera-proof-might easily manufacture and distribute the stuff in indefinite quantities, just as it now sends out tuberculin on a wholesale scale to all parts of the country, for testing cattle. But the Bureau of Animal Industry. which has worked out the problem, considers that it is now "up to" the states to appropriate the necessary money, es-tablish their own plants, and "immunize

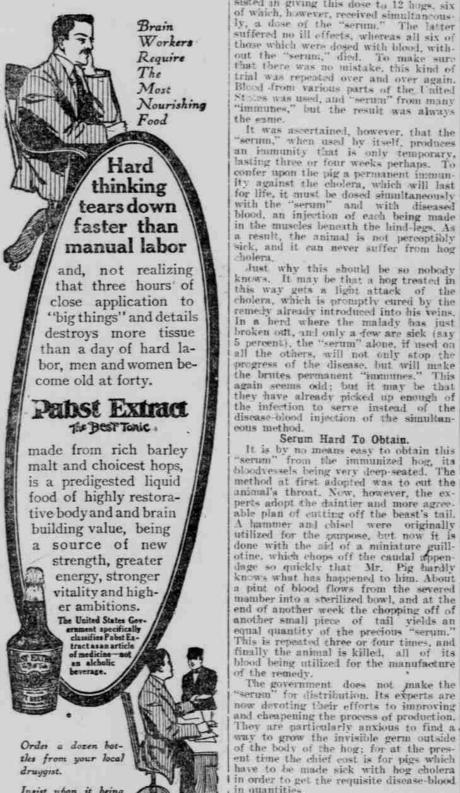

their own hogs.
States Take Up Work. They have taken up the idea with en-thusiasm—especially the states of the corn belt of the middle west, which are most interested in the hog-raising indus-try—and already the "serum" is being widely distributed in Gaio, Indiana Missouri, Minnesota, and Michigan. Illinois has made an appropriation for the work, and Kansas today is ready with 100, operate through the mediam of the pig exclusively. To begin with, Dr. Dorset exclusively.

000 doses of the preventative for use during the next few months. The government experiments have been conducted on a farm, specially equipped for the purpose, at Ames, in Iowa, and against the cholera. They were known to be immune because they had failed to invitations were sent out to the health authorities of all the states some time ago, asking them to come and see how the serum was made. Thirty states have blood of certain substances hostile to the already responded and by this means an cholera germs, acquaintunes with the method of treat. Into the be ment and the processes involved is being rapidly spread to all sections of the union.

Into the bolds of these particles was injected blood taken from cholerations was injected blood taken from cholerations was injected blood taken from cholerations with the mental of the bolds of the pig's body to union.

Fortunately, the matter, now that it has come to be understood, is very simple. But in order that it may be made clear, it should be explained that the supposed "germ" of hog cholera was discovered 25 years ago—a backans resembling that of typhoid fever; whence the term "ning typhoid sometimes applied to the disease. That this was really the responsible microbe was accepted as beyond sible microbe was accepted as beyond the property of question by scientists all over the world. , "hyper-immune." Nevertheless, there was something verodd about it. Efforts to make from it an fluid pressed out of it (to get rid of the effective "serum," or a satisfactory "vacuseless "fibrin") was the long-sought cine," were unsuccessful. When cultures "serum," which has solved the hog condif the bacillus in question were fed to era problem. When injected under developed a disease which bore all the marks of hog cholera. But other pigs, worth mentioning incidentally is that the though intimately associated with the experimenters found it practicable to innigs, or injected into their bodies, they animals thus made sick, did not take the much sick-hog blood as would have killed an ordinary pig, without even making the animal seriously uncomfort-able. lisease whereas hog choiera under nat-eral conditions is frightfully contagious.

Many Experiments. Hogs that have had the cholera, and recovered from it, are proof against the disease. But those pigs which got well after being made sick with the artificial complaint exhibited no such immunity.

Pabst.

Men Do You Want to be Cured

Consult Master Specialists

To those who begin treatment within the next few days, our fee will be less than half of the amount charged by other specialists. The following are the diseases of which we have cured so many men. Perhaps more than any other specialists, our cures are permanent and as a rule without detention from busi-

Variococele, and Hydrocele

diseases peculiar to men, and from the number of men who are not successfully treated for it, it appears to be less understood. We base our conclusions from the fact that the majority of specialists attempt to remove the rouble by internal treatments and local applications of medicines, which in itself shows that they are ignorant of how to cure varicoccle. If you are seeking a cure for varicoccle or hydroccle, you want to treat with specialists who will not drug you forever, but will cause toe calargement to disappear so that not a sign will be left, you had better let us show you what we have done in treating varicoccle; besides, we will tell you in the beginning how we will cure you, and you will know from what we tell you how simple a matter it will be and easy for us to do. There will be no weeks or menths of waiting, but one visit and one treatment will do the

Nervous and "Run-Down" Men

A weak and debilitated nervous system is the underlying cause of physical allments, and the inability of that throng of men who have through dissipation and excesses deprived themselves of the pleasures and satisfaction of health, is due to the lack of nerve power. There is no excuse for the multitude or men to continue to suffer this nervous "run down" condition. It was never intended that man at any time should be lacking in the essential elements that constitute a robust man, nor would any man ever suffer from ill health if his nervous system did not become weak and shattered. It has been our most serious and devoted study in the practice of our specialty as to how to accomplish the most for nervous and "self wrecked" men. Since the nervous system controls the action of all organs, and is the motor from which all power of the body is derived it is evident that the proper and only successful way to bring back strength and perfect health is to treat the nervous system. We revive the vim of health by a system that recharges the nerve force and builds up the system.

Rupture, Piles, Fistula, All Rectal Diseases

Rectal diseases are the least trouble to cure of any we treat, especially if they have not been neglected or hadly treated for so long that the diseased region has reached a stage where removal is necessary to establish a healthy connection. While rectal diseases are aggravating and painful and very debilitating, temporary relief can be accomplished quickly, though constant treatment, frequently from two to three months, is necessary in nearly all severe cases to effect a complete and lasting cure. Simple piles we cure in one treatment of 30 minutes.

The success we make in treating rectal diseases comes from observation and practice that has been a repetition of successes. We have gathered ideas and followed the lines of practice of leading rectal specialists, which has prepared us to render satisfactory service to many rectal sufferers who have heretofore been disappointed in taking treatment.

RUPTURE—We cure without surgery in shortest time possible.

Blood Poison --- SKIN DISEASES, SORES, ULCERS, PIMPLES, BLOTCHES, ITCH-

Blood poison is either specific or nonspecific. If specific it has arisen from contagion (catching) or by the transfer of poison virus, and it is occasionally inherited from parents, in which case it often appears in the form of scrofula, eczema or similar affections. The nonspecific form is ordinary skin disease, sores, ulcers, and eruptions, which are due to the blood becoming laden with impurities from the whole system getting out of gear so that poisonous matter accumulates. Don't allow the poison to be locked in your system. Have it eliminated, the components of the blood repaired, the tissues restored, and your whole system cleaned so that you will always have pure flesh and blood and robust health. Our method for treating the blood has accomplished all this for many who had despaired of a cure after having been deceived by specialists who had given them "lock-up" remedies in order to have them believe they were cured when the outward signs had gone. Make it your business to see us and satisfy yourself that we do not offer you, and would not, something that is deceptive and will do you harm in the end.

STRICTURE --- KIDNEYS, BLADDER, PROSTATIC, GLEET, INFLAMMATION AND KIDNEYS, BLADDER. PROSTATIC, GLEET, INFLAMMATION AND ALL

REMEMBER—One visit to our office is necessary before beginning treatment.

OUR BOOKS

SKIN, KIDNEY, RECTAL AND BLADDER DISEASES, CHRONIC DIS-EASES, DISEASES OF MEN, DISEASES OF WOMEN

They will prove interesting reading to all, no matter whether sick or well, as they discuss not only the causes changes and treatment of the above class of afflictions, but, they also tell how to prevent many diseases.

at home with ZEMO.

It was ascertained, however, that the "serum," when used by itself, produces an immunity that is only temporary, early summer of each year, and keeps on until cold weather arrives. The method lasting three or four weeks perhaps. To confer upon the pig a permanent immunadopted for dealing with it in future will ity against the cholera, which will last for life, it must be dosed simultaneously with the "serum" and with diseased be to stamp out epidemies at the start. When the malady develops on a farm, all the herds on the surrounding farms will at once be treated, to render the blood, an injection of each being made in the muscles beneath the hind-legs. As animals immune. So extremely cona result, the animal is not perceptibly sick, and it can never suffer from hog tagious is the disease that, if it were heglected and allowed to spread, the problem of dealing with it would be one Just why this should be so nobody of enormous difficulty. It is an easy matter to apply the remedy. The herd knows. It may be that a hog treated in this way gets a light attack of the cholera, which is promptly cured by the remely already introduced into his veins. In a herd where the malady has just thrust into the muscles beneath one thrust into the muscles

broken out, and only a few are sick (say hind-leg. Then the other hind-leg re-ceives an injection of disease-blood in 5 percent), the "serum" alone, if used on all the others, will not only stop the progress of the disease, but will make the same manner. The thing is accomplished in a moment. the brutes permanent "immunes." This again seems odd; but it may be that they have already picked up enough of An Expert's Opinion of Skin the infection to serve instead of the disease-blood injection of the simultan-Diseases eous method. A prominent, national expert on skin

Serum Hard To Obtain.

It is by no means easy to obtain this "serum" from the immunized hog, its bloodyessels being very deep-seated. The method at first adopted was to cut the animal's throat. Now, however, the expense adopt the daintier and more agree-seated as a most successful remady for the treatment of Exzems, teching skin discusses dandruff, pimples, blackheads A hammer and chisel were originally utilized for the purpose, but now it is done with the aid of a miniature guillotine, which chops off the caudal appendage so quickly that Mr. Pig hardly remedy for external use. A great improvement over the old style greasy a pint of blood flows from the severed mumber into a sterilized bowl, and at the end of another week the chopping off of another small piece of tail yields an equal quantity of the precious "serum." This is repeated three or four times, and finally the animal is killed, all of its blood being utilized for the manufacture of the remedy.

The government does not make the 'serum' for distribution. Its experts are now devoting their efforts to improving and cheapening the process of production. They are particularly anxious to find a way to grow the invisible germ outside of the body of the hog; for at the present time the chief cost is for pigs which have to be made sick with hog cholera Produces thick, luxuriant bair when all other remedies fail. We guarantee Danderine. All Druggists, 25c, 50c and 61, or send this Ad with 10c (stamps or silver) for a large free cample. I in order to get the requisite disease-blood
